Paint Calculator VB – Build Instructions

Though the project has already been compiled into an easy to use application, you may wish to rebuild the project. To do so simply follow these instructions:
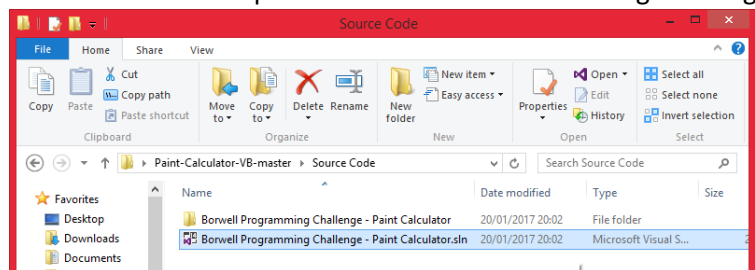

1. Download the GitHub Repository as a Zip File. (Or clone to your computer using GitHub Desktop)

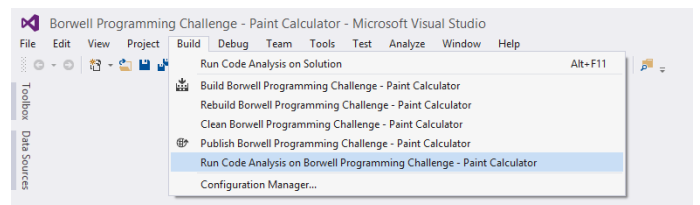

2. Open the Zip file and extract all contents to your desired folder:

3. Open the extracted folder, and browse to "Source Code" and open the file named "Borwell Programming Challenge - Paint Calculator.sln"

4. Finally, once the project file has finished loading, simple click on the top bar "Build" and finally hit "Publish"

   As an additional side note: Be sure to take note of where you choose to store the published application so you can run it later.
